

BEEM - Android XMPP - Feature #250

Better integration to Android

Description	
Hi.	
It would be nice if beem is correctly integrated to android. What I mean is the following: If I use e.g. the chat software "meebo" on Android, when I click on an ICQ contact entry in Android's contact program, Meebo is opened, and either it logs in to my ICQ account, or it questions me to add such an account.	
For GoogleTalk, if I click on a contact, Android asks me whether I want to use the Google Talk application or Meebo's XMPP.	
Would be nice if beem also offers this level of integration,.. at least for XMPP... perhaps also for GoogleTalk which is nothing different than XMPP.

We are working on it with the android 2.1 SDK. But it needs a lot of rewriting for some parts.
